ABSTRACT

This report, based on the 13th in a series of annual surveys, analyses the distribution of federal total and academic science support in terms of institutional recipients, agency of support, and geographic distribution. Information is also included on research and development support to nonprofit research institutes and federally-funded research and development centers administered by universities and nonprofit organizations. LETTER OF TRANSMITTAL

Washington, D.C.

DEAR MR. PRESIDENT:

I have the honor to transmit to you the analytical section of the report *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions, Fiscal Year 1975*, as required by the National Science Foundation Act as amended through April 1973.

The statistical portion of this report (*Appendix B, Detailed Statistical Tables*, NSF 77-303) was transmitted previously, under separate cover.

Respectfully,

RICHARD C. ATKINSON
Director
National Science Foundation

The Honorable
The President of the United States

Identical letters have been sent to:
The President of the Senate
The Speaker of the House of Representatives

FOREWORD

Throughout most of the Nation's 200 years, the main goal of the academic sector was the education of students in ideals and thought-processes consonant with a classical liberal education. In recent times, however, society has increasingly turned to our universities and colleges to help find solutions to many problems through research in such areas as disease, environmental pollution, urban decay, and most recently, energy depletion. With the aid of Federal Government funds, universities and colleges have increased their capabilities to assume new responsibilities through expanded research activities and increased emphasis in science and engineering education programs. Beginning in the early seventies, institutions found themselves caught in a tightening squeeze between the rising costs of maintaining expanded facilities and science faculties, and increases in Federal support that, when averaged over the years, were exceeded by the rate of inflation.

These conditions have caused both academic and Government officials to assess carefully the continued stability and viability of the Nation's universities and colleges. Attention continues to be focused on the impact of Federal policies on institutions of higher education, the types of support provided, and the amounts and distribution of Federal funds going to universities and colleges. The National Science Foundation, in accordance with its legislative mandate, provides a continuing source of statistical data and analyses of Federal support to universities and colleges designed to assist in Federal policy development and evaluation.

This report, based on the thirteenth in a series of annual surveys, analyses the distribution of Federal total and academic science support in terms of such characteristics as institutional recipients, agency of support, and geographic distribution. It also contains information on R&D support to nonprofit research institutes and Federally Funded Research and Development Centers administered by universities and nonprofit organizations.

We appreciation the cooperation of the staff members of the responding agencies without whose help the survey could not have been completed. The report was prepared in the Division of Science Resources Studies, Charles E. Falk, Director.

Richard C. Atkinson
Director
National Science Foundation

April 1977

general notes

- Figures shown in the tables in this report for fiscal year 1975 represent total obligations from 14 Federal agencies which are estimated to have accounted for over 95 percent of all Federal allocations to universities and colleges in the United States, and for 99 percent of all Federal obligations for research and development to such institutions. It should be noted, however, that these proportions *may not apply to all individual institutions*, some of which receive significant proportions of their funding from agencies not included in the survey—such as the Department of Justice, the National Foundation on the Arts and Humanities, or the Consumer Products Safety Commission. Agencies not included in the survey obligated a total of $16 million for research and development to institutions of higher education.[1]

- The Federal obligations shown in this report for the 178 selected nonprofit research institutes and for 7 Federally Funded Research and Development Centers (FFRDC's) administered by nonprofit institutions comprised about 89 percent and 92 percent, respectively, of the total amounts obligated to these types of institutions by all agencies of the Federal Government.[2] The 178 research institutes include all of those believed to have received $300,000 or more in Federal obligations for research and development.

- In general, hospitals, professional and technical societies, academies of science, museums, trade associations, and philanthropic foundations are not included in this study. Institutions of these types accounted for an estimated 23 percent of all Federal support to nonprofit organizations other than universities and colleges in 1975.[3]

- Federal obligations are reported for the fiscal year ending June 30th of the year shown, regardless of when the funds were actually spent. *Obligations* differ from *expenditures* in that funds allocated during one fiscal year may be spent by the recipient either partially or entirely during one or more subsequent years. *Loans* are excluded, as are *agency support of Federal employee training and development activities* and all forms of *indirect support*, such as funds allocated to State agencies, even if the final destination of such funds is known to be an educational institution.

- Interagency transfers of funds are reported by the agency which actually made the award to an institution rather than by the original source. For example, funds transferred from the Department of Agriculture to the Department of Commerce and then obligated to a university would be shown under the Department of Commerce. In this respect the present survey differs from the annual series, *Federal Funds for Research, Development, and Other Scientific Activities*, also published by the National Science Foundation. In the *Federal Funds* surveys, such obligations are reported by the originating agency.

- Statistics shown in text tabulations may not add to totals or subtotals because of rounding; similarly, percents shown may not add to 100.

- Unless constant dollars are specified, data shown in this report are in terms of current dollars. Where data are shown in terms of constant dollars, they are based on the gross national product (GNP) implicit price deflators as determined by the Department of Commerce. The GNP implicit price deflator measures the impact of economic conditions on dollar amounts at the time awards are made by the Federal agencies. To the extent that there is a timelag between the Federal awards and actual expenditure of the funds by universities and colleges, future economic conditions have an impact on the real value of goods and services.

[1] Based on data presented in National Science Foundation, *Detailed Statistical Tables, Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1975, 1976, and 1977*, Vol. XXV (NSF 76-315) (Washington, D.C. 20550).

[2] *Ibid.*

[3] Estimates based on data published in National Science Foundation, *R&D Activities of Independent Nonprofit Institutions, 1973* (NSF 75-308) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1975.)

acknowledgments

This report was prepared in the Division of Science Resources Studies, Universities and Nonprofit Institutions Studies Group, by J.G. Huckenpahler, with the assistance of Janet Schneider. The survey was conducted and the report prepared under the supervision of Richard M. Berry, Study Director. William L. Stewart, Head of the R&D Economic Studies Section, provided special guidance. Statistical assistance was provided by M. Margaret Machen.

See note on p. 29.

HIGHLIGHTS

- Federal obligations to institutions of higher education totaled $4,517 million in fiscal year 1975, an increase of 1 percent in current dollars over the $4,463 million obligated in 1974. This 8-percent decline in constant-dollar terms follows a substantial increase (17 percent in current dollars) between 1973 and 1974, which, to a large extent, reflected the release of approximately $260 million in impounded 1973 funds for the Department of Health, Education, and Welfare (HEW).[1]
- Institutions of higher education received 14 percent of their funds from Federal sources, compared with over 20 percent in the middle sixties.
- Academic science obligations increased by 2 percent—to $2,790 million—and accounted for 62 percent of all obligations. In constant dollars these obligations declined nearly 8 percent, to a level 23 percent below the peak year of 1967.
- Federal obligations to universities and colleges for research and development totaled $2,223 million, or 7 percent more than the 1974 total. In constant dollars this represents a decline of nearly 4 percent. Academic institutions received 12 percent of the total Federal R&D obligations to all sectors of the economy.
- Obligations for fellowships, traineeships, and training grants dropped sharply to $201 million, the lowest figure since separate data for this category of obligations began to be collected in 1971. This total reflects a decline of 38 percent since 1974; however, the 1974 figure included an estimated $60 million in released 1973 funds which were obligated for fellowships, traineeships, and training grants.
- Based on data obtained in another survey series, the number of graduate students supported under federally sponsored fellowships and traineeships are believed to have reached a peak in academic year 1967-68 and declined steadily since.[2]
- R&D plant obligations accounted for $45 million, up 54 percent since 1974. This follows the pattern of sharp fluctuations which this category of support has displayed throughout the seventies.
- HEW obligations declined by 2 percent between 1974 and 1975 to $3,178 million, but still accounted for 70 percent of the total. When the $260 million in released 1973 funds are subtracted from the 1974 figure, however, the decline becomes a 7-percent increase.
- Federal agencies obligated more funds to institutions in California than to any other State, $529 million. This represents an increase of less than 1 percent over the $527 million obligated to these institutions in 1974. New York institutions received the second largest amount, $454 million—up 12 percent since 1974.
- The 100 leading institutions in terms of Federal obligations received $2,949 million, or 65 percent of the total. In 1974 a similar group of top 100 institutions[3] received $2,941 million, 66 percent of that year's total. The proportion obligated to the leading institutions has remained relatively stable at about two-thirds of the total since 1972, after declining from a high of 87 percent in 1963.
- Federally Funded Research and Development Centers (FFRDC's) administered by universities and university consortia, received $1,207 million in 1975, or an increase of 11 percent since 1974. In constant-dollar terms, the rate of increase was about 1 percent.
- The 178 independent nonprofit research institutions for which obligations were reported by the responding agencies received $391 million in 1975. Of this amount, HEW was the source of the largest proportion, 45 percent. HEW obligations to nonprofit institutions increased 22 percent between 1974 and 1975, while the obligations of the Department of Defense, the second largest source of support, declined by 4 percent.

[1] This amount is somewhat higher than the $210 million reported in 1974, and results from a revised estimate on the part of NIH personnel.

[2] National Science Foundation, *Graduate Science Education: Student Support and Postdoctorals, Fall 1974* (NSF 76-313) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1976.)

[3] Ninety-one of the 100 institutions appeared on both the 1974 and 1975 lists.

INTRODUCTION

Background

The data-collection system which produces the statistics upon which this report is based was established in response to the requirement in the National Science Foundation Act of 1950, as amended in 1968 and 1973, that NSF ". . .initiate and maintain a program for the determination of the total amount of money for scientific research, including money allocated for the construction of facilities wherein such research is conducted, received by each educational institution and appropriate nonprofit organization in the United States, by grant, contract, or other arrangement from agencies of the Federal Government, and to report annually thereon to the President and the Congress."

The statistical data assembled through the survey system are intended to provide a comprehensive picture of the level and distribution of Federal funding awarded directly to institutions of higher education. Certain types of Federal programs are excluded, such as loans, Federal employee training, and funds awarded to State agencies whose ultimate destination is educational institutions. Included are the following categories of Federal support: Research and development; R&D plant; facilities and equipment for instruction in the sciences and engineering; fellowships, traineeships, and training grants; general support for science (e.g., institutional block grants); support for other scientific activities; and support for nonscience activities.

Separate data are provided for FFRDC's administered by institutions of higher education, selected independent nonprofit research institutes, and nonprofit-administered FFRDC's.

Scope and Limitations of Data

The data presented in this report for fiscal year 1975 were obtained from the following 14 Federal agencies, listed by the acronyms and abbreviations used to designate them.

AID—Agency for International Development
COMMERCE—Department of Commerce
DOD—Department of Defense
DOT—Department of Transportation
EPA—Environmental Protection Agency
ERDA—Energy Research and Development Administration
HEW—Department of Health, Education, and Welfare
- ADAMHA—Alcohol, Drug Abuse, and Mental Health Administration
- CDC—Center for Disease Control
- FDA—Food and Drug Administration
- HRA—Health Resources Administration
- HSA—Health Services Administration
- NIE—National Institute of Education
- NIH—National Institutes of Health
- OE—Office of Education
- SRS—Social and Rehabilitation Service

HUD—Department of Housing and Urban Development
INTERIOR—Department of the Interior
LABOR—Department of Labor
NASA—National Aeronautics and Space Administration
NRC—Nuclear Regulatory Commission
NSF—National Science Foundation
USDA—Department of Agriculture

These 14 agencies accounted for over 95 percent of all Federal funds obligated to the 2,517 academic institutions and 21 university-administered FFRDC's covered in part I of this report and to the 178 independent research institutes and 7 nonprofit-administered FFRDC's included in part II.

Dollar amounts shown in this report represent actual obligations incurred by the responding agencies during the fiscal year, regardless of when the funds were actually spent. All amounts obligated during the fiscal year beginning on July 1st and ending on June 30th are included in that year's total.

Since the funds may not be received or spent in the same year, the totals reported by the responding agencies may not be comparable to actual expenditures as reported by the institutions.

Variations between Federal agency figures and those maintained by individual institutions may occur also in the case of institutions which are members of university systems. When an award is made in the name of the university system and the granting agency is unable to determine how the funds were distributed among the individual institutions in the system, the funds are reported as obligated to the system as a whole under the title "system office" or "central system". Such awards totalled $53 million obligated to 31 system offices in 1975. Although this amount in total represents only about 1 percent of all Federal obligations to universities and colleges, the effect on some individual institutions may be significant. Institution totals will be understated by the amount allocated to them by the system offices.

Part I

FEDERAL SUPPORT TO UNIVERSITIES AND COLLEGES

Section 1. FEDERAL SUPPORT, ALL CATEGORIES

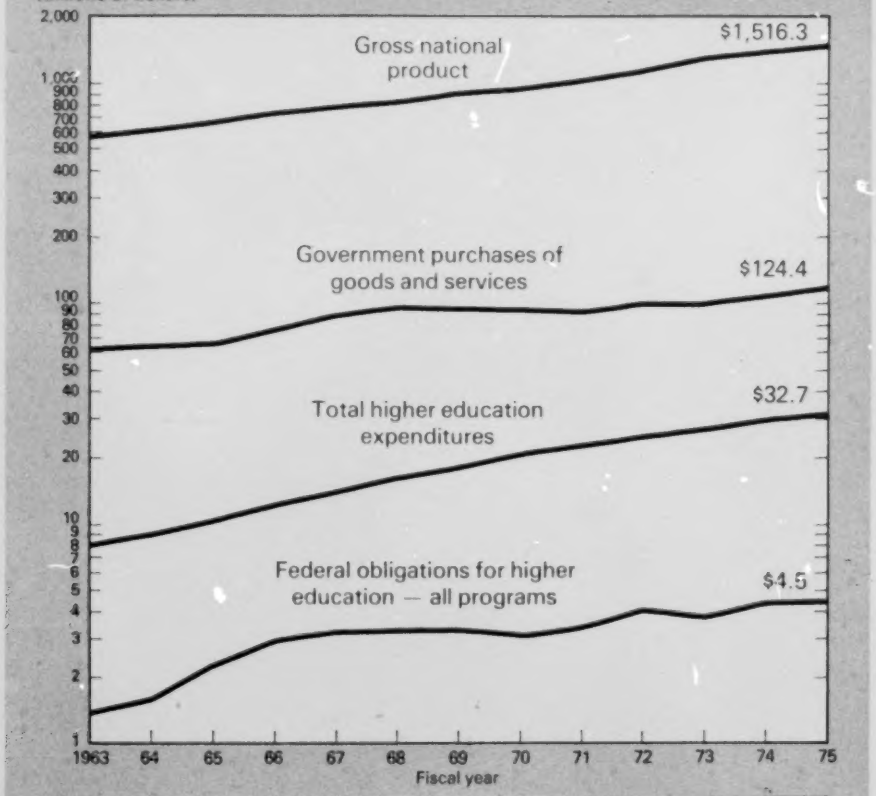
Trends

Institutions of higher education received $4.5 billion from the Federal Government in 1975, 1 percent above the 1974 figure. Ninety-nine percent of the increase occurred in obligations for academic science, which rose by 2 percent, while nonscience obligations remained at the 1974 level of $1.7 billion.

The proportion of all Federal Government outlays allocated to academic institutions has fluctuated between 3 percent and 4 percent since the midsixties after rising sharply from about 2 percent in 1963. Federal agencies supplied 14 percent of the total funds spent by educational institutions in 1975; this is comparable to the proportions in recent years, but far less than was supplied in the 1965 through 1968 period, when more than 20 percent of the funds spent by universities and colleges came from Federal sources.

Federal obligations to universities and colleges accounted for just under 0.3 percent of the gross national product (GNP) in 1975, slightly less than the 1974 proportion but about the same proportion as in 1973. It should be noted, however, that the 1974 figure for total Federal obligations to universities and colleges includes an estimated $260 million in impounded 1973 funds which were released and obligated by the National Institutes of Health (NIH).

Federal support of higher education compared with other economic variables: FY 1963-75



Economic indicator	Average annual growth (percent)		Percent change				
	1963-67	1967-70	1970-71	1971-72	1972-73	1973-74	1974-75
GNP	8	7	8	10	12	8	7
Gov't purchases of goods and services	9	2	1	6	0	9	11
Total higher education expenditures	15	14	11	10	8	8	8
Fed. obligations for higher education	24	1	8	18	7	17	1

SOURCES: Department of Commerce, National Science Foundation, Office of Education, and Office of Management and Budget.

Category of Support

Federal obligations for academic science and nonscience obligations both have tended to follow the general pattern of rapid growth during the early years of the survey series followed by slower growth, with occasional declines, since 1969. The fluctuations in the rate of change have been more pronounced in nonscience obligations, however, as these obligations jumped from $85 million—6 percent of the total—to $1,532 million, or 37 percent of the total, between 1963 and 1972. The $1,727 million reported in 1975 represents 38 percent of the total.

Total Federal obligations to academic institutions in terms of constant (1972) dollars peaked in 1967, and have shown an overall decline since that year averaging nearly 2 percent per year. Thus the rate of increase in current dollars, averaging 4 percent per year, has made up only about two-thirds of the losses in purchasing power due to inflation.

The proportions of the total obligations allocated to the various categories of activity have varied significantly during the 13 years covered by the survey series. Academic science obligations declined from 94 percent of the total in 1963 to 61 percent in 1974 and 62 percent in 1975. Obligations for research and development, which accounted for about 60 percent of the total

Federal obligations to universities and colleges, by category of support, in current and constant (1972) dollars: FY 1963–75

in 1963 and 1964, declined to less than 40 percent in 1967 and have remained at just under 50 percent since 1973. R&D plant obligations, over 7 percent of the 1963 total, dropped below 1 percent in 1971 and have remained around that figure in subsequent years, though fluctuating between $29 million and $45 million. Meanwhile, obligations for other science activities, accounting for more than one-fourth of the total in 1963 through 1968, have declined since then to less than one-eighth of all obligations.

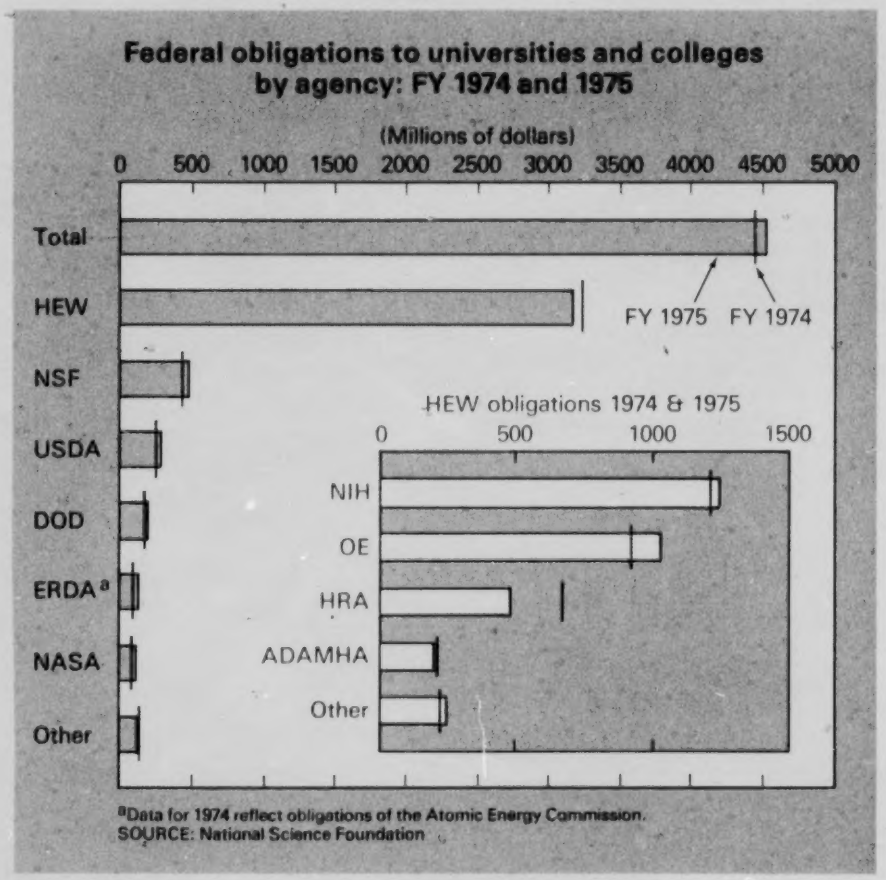
Agency Distribution

In 1975, as in earlier years, HEW was the source of the vast majority of Federal funding for academic institutions, accounting for $3,178 million, or 70 percent of the total. This represents a slight decline from the $3,234 million obligated by HEW in 1974, accounted for primarily by a cutback in the obligations of the Health Resources Administration from $662 million to $481 million. This was partially offset by a 12-percent increase in the obligations of the Office of Education, primarily for nonscience activities. In part, however, the decline was only apparent, caused by the release in 1974 of the $260 million of impounded 1973 funds. When 1974 funds alone are considered, HEW obligations actually increased by 7 percent between 1974 and 1975.



The National Science Foundation (NSF) accounted for the second largest amount—$491 million, or 11 percent of the total—roughly the same proportion as in recent years, and a 9-percent increase over the 1974 amount. The Department of Agriculture (USDA), with 6 percent of the total, and the Department of Defense (DOD), with 4 percent, occupied the same relative positions as in 1974. With the Energy Research and Development Administration (ERDA) replacing its predecessor agency, the Atomic Energy Commission, and the National Aeronautics and Space Administration (NASA) retaining its sixth place position, the six leading agencies accounted for 97 percent of the total, the same proportion as in 1974.

Geographic Distribution

Institutions in the Middle Atlantic States replaced those in the Pacific States in first place among the Nation's geographic divisions by accounting for nearly 17 percent of all Federal obligations. This amount represents an 8-percent increase since 1974. Institutions in the Pacific States received the second largest amount (16 percent of the total), followed closely by those in the South Atlantic and East North Central divisions. As in earlier years, these four divisions were closely grouped (with only 2 percentage points between the first and fourth), and together accounted for 63 percent of the total.

Federal obligations to universities and colleges by geographic division: FY 1974-75

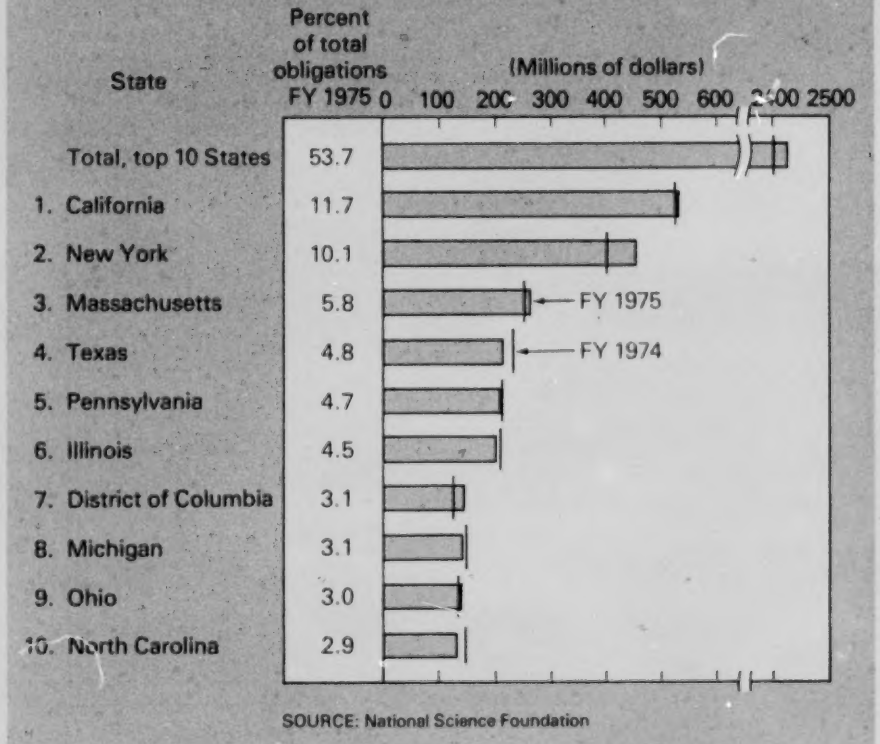
On a State-by-State distribution California institutions again received the largest amount, $529 million or 12 percent of the total, substantially the same proportion as 1974. Institutions in New York received the second largest amount, $454 million or 10 percent of the total, increasing by 12 percent from 1974 to 1975. Among the remaining institutions within the top 10, Massachusetts, the District of Columbia, and Ohio had increases of between 1 percent and 15 percent, while the remaining 5 showed decreases of up to 9 percent.

Federal obligations to universities and colleges in the 10 States receiving the largest amounts: FY 1974 and 1975



SOURCE: National Science Foundation

Institutional Distribution

Institutions in the largest size class, those receiving $10 million or more in Federal obligations, accounted for 70 percent of the total amount awarded to all institutions, about the same proportion as in 1973 and 1974. During these 3 years, however, the number of institutions in this category has increased from 103 to 115. The total amount awarded to these 115 institutions in 1975 was $3,108 million, an increase of 2 percent since 1974. Altogether, the 443 institutions receiving $1 million or more accounted for 90 percent of the total, the same proportion as in 1974. Institutions receiving less than $1 million accounted for $465 million, an increase of 4 percent over the amount awarded to institutions in this size-class in 1974. However, because of the gradually increasing awards to all institutions, there were 12 fewer institutions in this group in 1975 than in 1974.

Federal agencies obligated $2,949 million to the 100 leading institutions (in terms of Federal funds obligated) in 1975, substantially the same as 1974. This represents about two-thirds of the total obligated to all institutions, similar to the proportion in 1974 and other recent years, but below the 87 percent reported in 1963. This decline in the degree of concentration is largely

the result of increases in nonscience grants by the Office of Education. Of the 100 institutions receiving the largest amounts in 1975, 91 were also in the top 100 in 1974. Within the top 100, the 10 leading institutions accounted for 16 percent of the total, the top 25 (1 percent of all institutions) for 32 percent, and the top 50 (2 percent of all institutions) for 48 percent. In each case, the proportion was the same in 1974.

Four of the 10 leading institutions showed declines between 1974 and 1975: the University of Washington, Harvard, the University of California at San Diego, and the University of Wisconsin at Madison. Increases in the remaining six ranged from less than 2 percent at the University of California at Los Angeles to 12 percent at Howard.

[1] Amounts shown represent awards to individual institutions. Awards to the Administrative offices of university systems are excluded because final allocation of funds is unknown.

[2] FY 1975 obligations represent total obligations from 14 Federal agencies which accounted for over 95 percent of all Federal obligations to universities and colleges in the United States, and for 99 percent of all Federal obligations for research and development to such institutions. These rankings may not apply to all individual institutions, some of which receive significant portions of their funding from agencies not included in the survey, such as the Department of Justice, the Arts and Humanities Foundation, or the Consumer Products Safety Commission.

SOURCE: National Science Foundation.

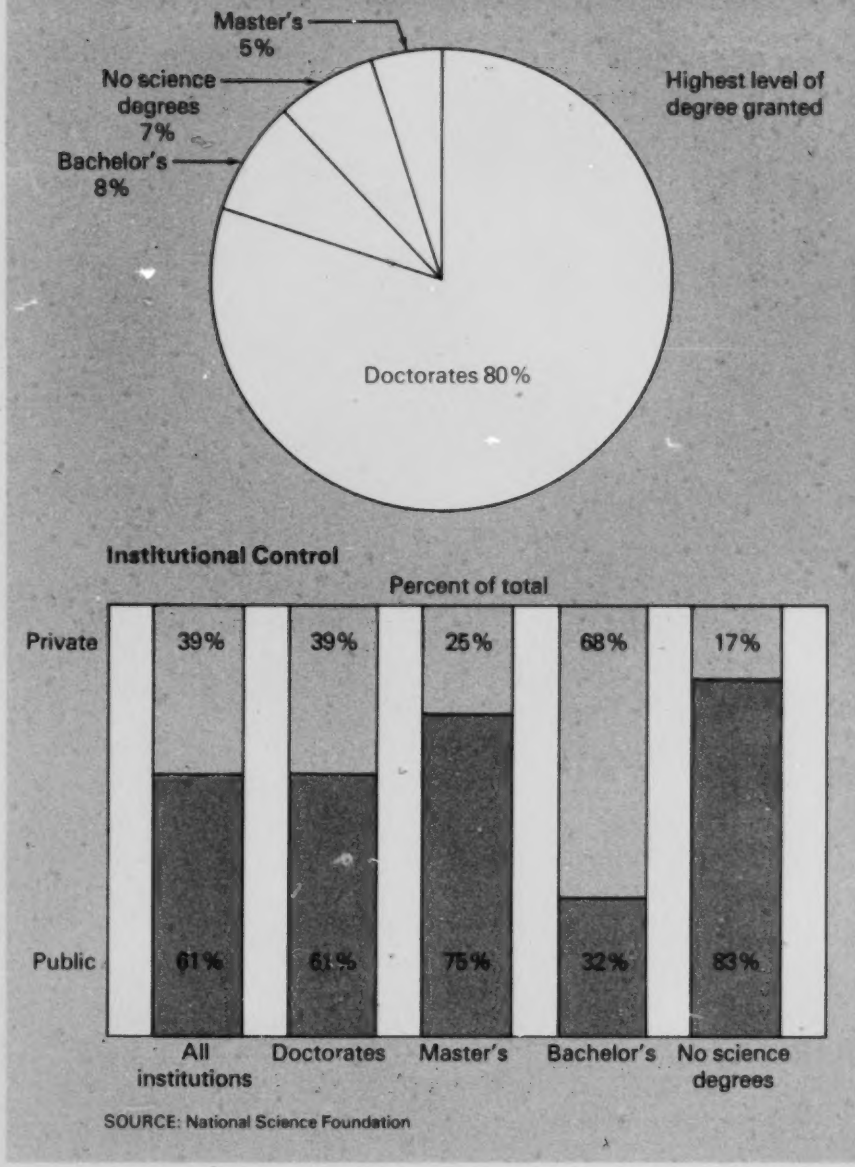
Highest Level of Degree Granted

For the first time since 1972, data were obtained on obligations to various groups of institutions classified in terms of highest level of earned degrees conferred. As in earlier years, the majority of the funds were obligated to doctorate-granting institutions—$3,624 million, or 80 percent of the total. At all levels except the baccalaureate-granting schools, the majority of the funds were obligated to public institutions. Doctorate-granting institutions accounted for 97 percent of all obligations for academic science, and 98 percent of all obligations for research and development, but for only 53 percent of all nonscience obligations. Conversely, junior colleges and other institutions not granting degrees in the sciences and engineering received only one-half of 1 percent of all academic science obligations, but received 16 percent of all nonscience obligations.

Institutional Control

In 1975 the 1,218 public institutions receiving Federal obligations accounted for a total of $2,744 million, or 61 percent of the total—the same proportion as in 1974. This represents a 1-percent increase since 1974. Obligations to private institutions increased at about the same rate.

Federal obligations to universities and colleges, by highest level of degree granted in the sciences and engineering and institutional control: FY 1975



SOURCE: National Science Foundation

Section 2. ACADEMIC SCIENCE SUPPORT AND R&D ACTIVITIES

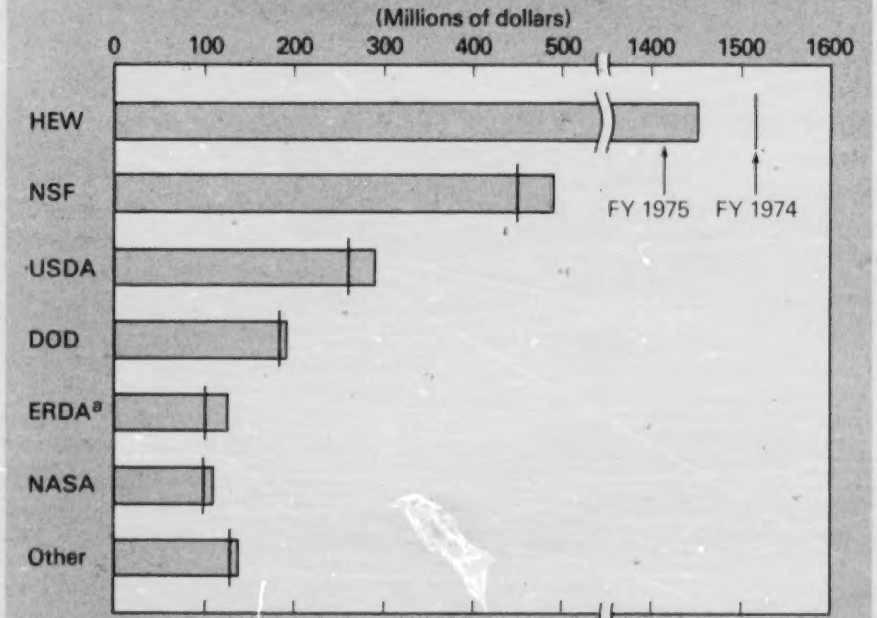
Academic Science Support

Academic science obligations of the 14 Federal agencies included in the survey system totaled $2,790 million in 1975, an increase of only 2 percent over the 1974 total. In constant-dollar terms, this is the equivalent of an 8-percent decrease. The proportion of total Federal obligations allocated to academic science has stabilized between 60 percent and 65 percent since 1972, after dropping sharply in the mid- and late sixties. In the first 2 years of the survey series, academic science obligations made up 94 percent of the total.

HEW was the main source of obligations for academic science, with $1,452 million, or 52 percent of the total. This is considerably smaller than the HEW share of all Federal obligations—70 percent—largely because of the substantial obligations of the Office of Education and the Health Resources Administration for nonscience activities. Together, these two components of HEW were responsible for 86 percent of the nonscience obligations reported.

The five other leading agencies (NSF, USDA, DOD, ERDA, and NASA), by contrast, reported all of their obligations to educational institutions as academic science. Consequently, their shares of the academic science total were significantly higher than in the case of total obligations. NSF accounted for 18 percent of the total, up from 16 percent in 1974; USDA accounted for 10 percent of the total in each year; and DOD for about 7 percent in each year. Altogether, the six leading agencies were the source of 95 percent of all academic science obligations, the same proportion as in 1974.

Federal obligations for academic science by agency: FY 1974 and 1975



[a]Data for 1974 represent obligations of the Atomic Energy Commission.
SOURCE: National Science Foundation

R&D Support

Obligations for academic research and development of the 14 agencies included in the survey system totaled $2,223 million in 1975, an increase of 7 percent over the 1974 total. In constant-dollar terms this is a decline of nearly 4 percent from the previous year's figure. An additional $16 million—less than 1 percent of the total—is estimated to have been obligated by agencies not surveyed, about the same amount as in 1974[1].

HEW supplied the largest proportion, $1,189 million, or 53 percent of the total. This represents a 5-percent increase since 1974. NSF, the second largest supporter of academic research and development, was the source of $397 million, or 18 percent of the total, while DOD, in third place, accounted for $190 million, or 9 percent. The six leading agencies (including ERDA, USDA, and NASA) made up 95 percent of all R&D obligations. The total amount obligated by the remaining agencies increased by 6 percent over the 1974 amount.

[1] Based on data presented in the National Science Foundation's *Detailed Statistical Tables, Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1975, 1976, and 1977*, Volume XXV (NSF 76-315) (Washington, D.C. 20550, 1976.)

FIELD OF SCIENCE

As in previous years, a majority of all R&D obligations—$1,209 million or 54 percent of the total—supported projects in the life sciences. This amount represents a 7-percent increase since 1974, and reflects the influence of a decline of 4 percent in the amount obligated by NIH for research in nonclinical medical sciences (from $185 million to $178 million). In all, HEW was the source of 82 percent of the R&D obligations in the life sciences, while 83 percent of HEW's R&D obligations were allocated to the life sciences.

Obligations supporting research projects in the physical sciences, the second largest group, reached $307 million in 1975, an increase of 17 percent since the previous year. NSF supplied 35 percent of this amount, followed by ERDA with 19 percent of the total and NASA with 15 percent. Conversely, the physical sciences accounted for 27 percent of all NSF R&D obligations and for 50 percent of all ERDA R&D obligations.

Of the major fields of science, only psychology and "other sciences, n.e.c." showed declines between 1974 and 1975—16 percent and 53 percent, respectively. The latter decrease is primarily the result of shifts in the field distributions reported by three agencies, DOD, HEW, and NSF, and is believed to reflect an increased ability on the part of agency program personnel to classify projects among the other major fields, rather than a decrease in true interdisciplinary projects.

GEOGRAPHIC DISTRIBUTION

As was the case in 1974, the surveyed agencies allocated the largest proportion of their R&D obligations to institutions in the Pacific States—20 percent of the total. The largest increase in absolute terms occurred in obligations to institutions in the Middle Atlantic States—from $368 million to $408 million, or 11 percent. In relative terms, however, the rate of increase was higher in the outlying areas—16 percent over the 1974 total.

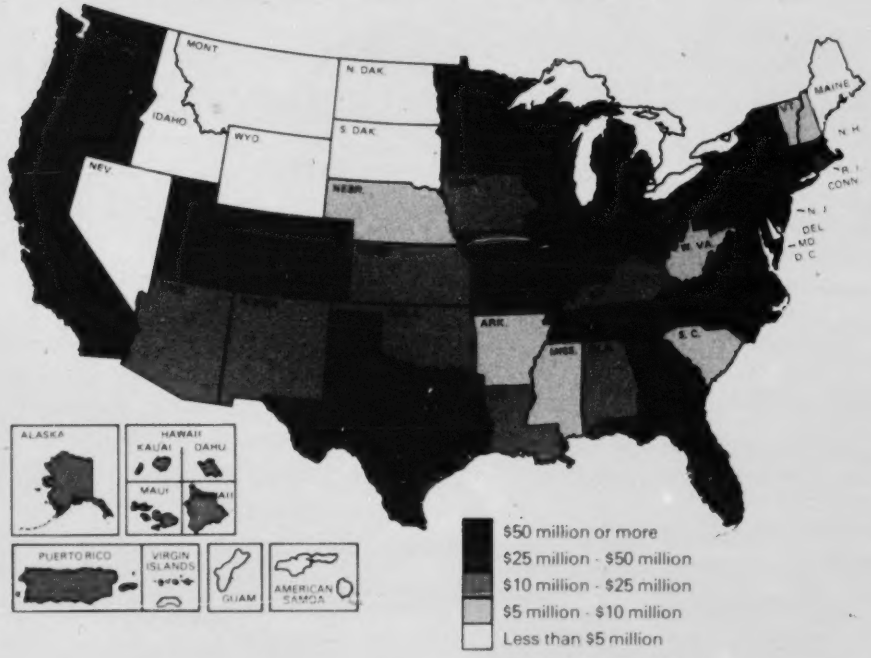
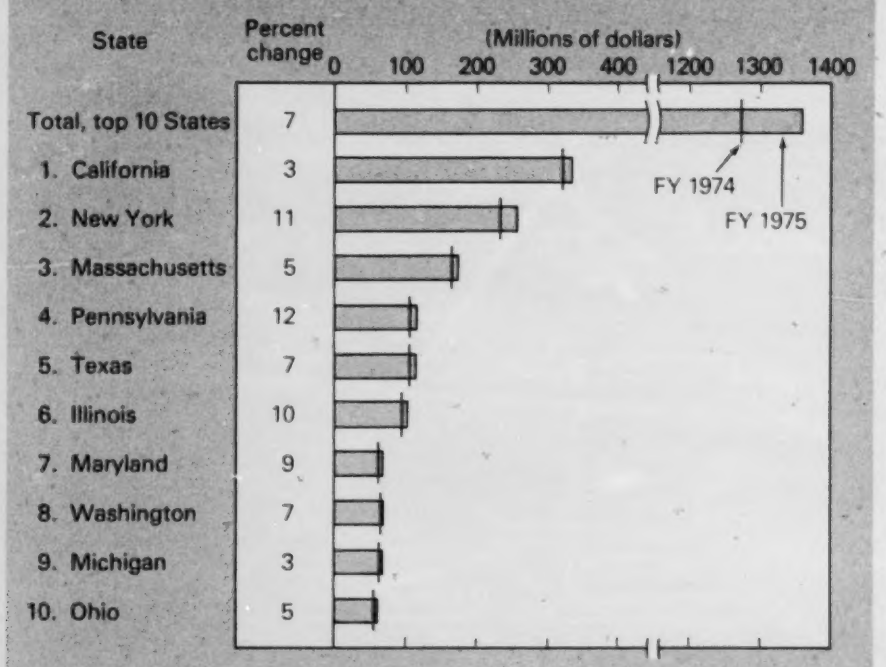
Source: National Science Foundation

In recent years Federal R&D obligations have been concentrated in States along the Atlantic and Pacific seacoasts and the Great Lakes. Texas was the only State outside these areas to receive $50 million or more. The same 12 States comprised the highest category in terms of R&D obligations received ($50 million and over) in 1974 and 1975. California, with $334 million, remained in first place during these years, although obligations to California institutions increased at a slower rate than between 1973 and 1974 (3 percent compared to 10 percent). New York and Massachusetts remained the second and third largest recipients with $259 million and $174 million, respectively. Altogether, 61 percent of all R&D obligations went to institutions in the 10 leading States. Nine of these States were also among the top 10 in 1974.

Federal obligations to universities and colleges for fellowships, traineeships, and training grants: FY 1971-75



Federal R&D obligations to universities and colleges in the 10 States receiving the largest amounts: FY 1974 and 1975



SOURCE: National Science Foundation

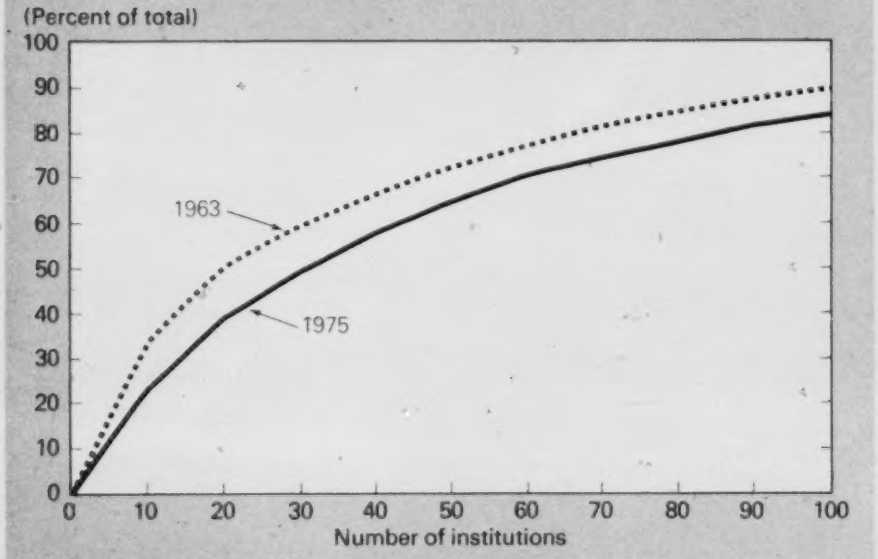
INSTITUTIONAL DISTRIBUTION

The 14 surveyed agencies obligated funds for research and development to 556 individual universities and colleges and to 22 system offices. This is an increase of 7 institutions and 3 system offices over the numbers for whom such obligations were reported in 1974. Among these, the degree of concentration was much higher than was the case for total Federal obligations; of the 588 institutions and system offices, 342 received less than $500,000.

The 100 leading institutions received $1,878 million, or 85 percent of the total. This represents roughly the same proportion as was allocated to a similar group of institutions in 1973 and 1974, but less than the 90 percent allocated to the top 100 institutions in 1963.[2] Of this amount, the top 50 institutions received $1,446 million, or 65 percent of all funding.

[2] To some extent, this reflects institutional reorganizations which resulted in entities which were formerly reported as single institutions being shown as several institutions in later years.

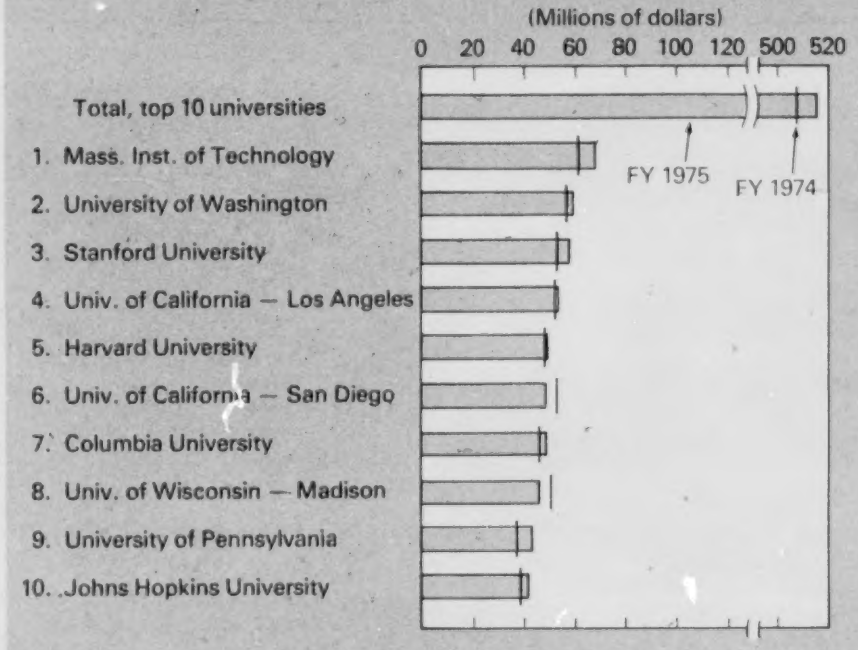
Federal R&D obligations to the 100 universities and colleges receiving the largest amounts: FY 1963 and 1975



SOURCE: National Science Foundation

Eight of the 10 leading institutions receiving Federal R&D support in 1975 were also among the top 10 in 1974. Massachusetts Institute of Technology, ranked first in every year since the survey series began, received $69 million—12 percent more than in 1974. The University of Washington ranked second with $60 million, while Stanford University, in third place, received $58 million. The top 10 institutions combined accounted for $516 million, or 23 percent of the total awarded to all institutions.

Federal R&D obligations to the 10 universities receiving the largest amounts: FY 1974 and 1975



SOURCE: National Science Foundation

The 20 institutions receiving the largest amounts of Federal R&D obligations received 39 percent of all funding for such purposes. The relative stability of this group is indicated by the fact that since 1963 these same 20 institutions have never received less than 37 percent of the total funds obligated, and in 1963 their proportion of the total was 45 percent. In some cases, sharp changes in the amounts shown reflect organizational restructuring. For example, the apparent decline from 1973 to 1974 in the amount obligated to the Massachusetts Institute of Technology results from the separation of the Charles Stark Draper Laboratory from the parent institution and its transfer to the nonprofit sector.

R&D Plant

Federal agencies obligated $45 million to universities and colleges for R&D plant during 1975. Although this represents a 54-percent increase since 1974, it is still far below the amounts obligated in earlier years. From 1963 to 1967, the surveyed agencies obligated more than $100 million in each year for R&D plant, while between 1968 and 1971 the amount obligated declined each year to less than $30 million.

As in 1974, only four agencies reported R&D plant obligations; of these, NIH accounted again for more than one-half or $23 million. NSF, the second ranked agency, obligated $18 million or 39 percent of the total; ERDA was responsible for most of the remainder.

The largest single recipient of R&D plant obligations in 1975 was Yeshiva University with $9 million, or 19 percent of the total. The University of California at San Diego received $8 million, or 18 percent of the total. Since the most common type of obligation for R&D plant is a one-time construction grant, such obligations tend to fluctuate more widely than other categories of support. In fact, of the 10 institutions receiving the largest amounts in 1975, only 4—Yale, Stanford, the University of California at Los Angeles, and Massachusetts Institute of Technology—were among the top 10 in 1974. The 10 leading institutions in 1975 accounted for 89 percent of the total, leaving only 11 percent to be distributed among the remaining 44.

Section 3. SCIENCE EDUCATION AND OTHER SCIENTIFIC ACTIVITIES

The surveyed agencies obligated $522 million for the support of scientific activities other than research and development and R&D plant in 1975, a decline of 16 percent since 1974. This follows the general pattern of decline which has characterized obligations of these types since the peak year of 1967, when the total reached $911 million. Since that time, obligations for all scientific activities have declined at an average annual rate of 7 percent.

Since 1971, separate data have been requested within this broad category for facilities and equipment for instruction in the sciences and engineering; for fellowships, traineeships, and training grants; and for general support for science (through broad-purpose institutional block grants of various types). The residual, "other science activities", includes Federal support for such activities as short teacher-training courses, conferences, maintenance, and other types of programs not assignable to any of the other categories, but clearly science-oriented. In 1975, for the first time, this residual category made up more than one-half of the total, largely because of severe cutbacks in fellowships, traineeships, and training grants and in general support for science.

Federal obligations to universities and colleges for science education and other scientific activities by type of activity: FY 1971-75

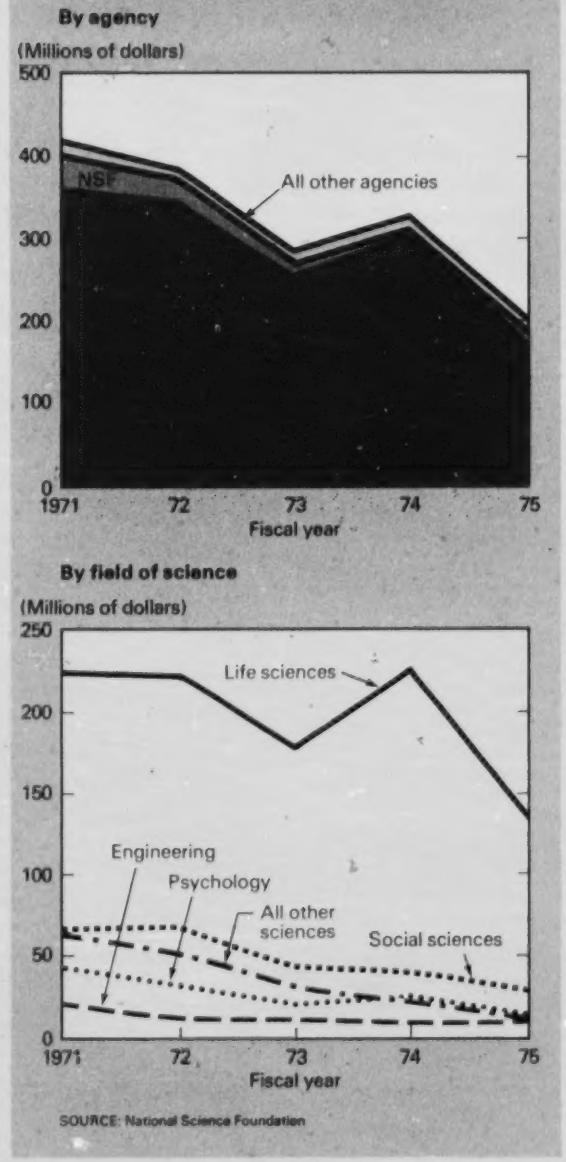
Fellowships, Traineeships, and Training Grants

Federal obligations aimed at the development and maintenance of scientific manpower declined from $327 million in 1974 to $201 million in 1975, a drop of 38 percent. The amounts obligated for these purposes have declined every year since separate data began to be collected in 1971, with the exception of 1974 when the release of an estimated $60 million in impounded 1973 funds gave the appearance of a $40 million increase. To a large extent, these declines are the result of a shift in Federal policy, especially in NIH and NSF, from direct support of graduate students through fellowships and traineeships to indirect support through allocations for R&D projects upon which graduate students may be employed as research assistants.

HEW was the largest source of fellowships, traineeships, and training grants, as was the case in previous years. Of the total, 90 percent was funded by HEW, and 70 percent by NIH. Most of the remainder (5 percent) was obligated by NSF.

As in 1974, the life sciences remained the largest field of fellowships and traineeships, with 67 percent of the total, or $136 million. Of this amount, HEW was the source of 98 percent. The social sciences, the second largest field, accounted for 15 percent of the total. In this case, HEW provided 93 percent of the total.

Federal obligations to universities and colleges for fellowships, traineeships, and training grants: FY 1971-75



SOURCE: National Science Foundation

A total of 358 institutions and 19 system offices received funds for fellowships, traineeships, and training grants in 1975; of these, 50 received more than $1 million and together accounted for 76 percent of the total. Harvard University, the leading institution, received $8 million or 23 percent less than in 1974. Of the 10 leading recipients, 8 were also in the top 10 in 1974. These institutions accounted for $59 million, or 30 percent of the total.

All other institutions	20,442	10.2

Source: National Science Foundation

Facilities and Equipment for Instruction

Obligations of the surveyed agencies for facilities and equipment for instruction reached $12 million in 1975. While this amount is some 3-½ times the total reported in 1974, it is only 43 percent of the $29 million obligated for such purposes in 1971. Three agencies supplied the entire amount: NSF was the major source, with $7 million or 60 percent of the total; OE reported $5 million or 39 percent; and the Department of Commerce supplied the remaining 1 percent.

General Support for Science

Federal obligations for general support for science fell by nearly one-half to $46 million, only slightly higher than the 1973 level of $39 million. NIH was the source of 80 percent of these funds, primarily through its Biomedical Sciences Support Grants, Health Science Advancement Grants, and General Research Support Grants. NSF's Institutional Grants for Science Program, which had provided $18 million for this purpose in 1974, was phased out in 1975.

Section 4. FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS ADMINISTERED BY UNIVERSITIES AND COLLEGES

The term "Federally Funded Research and Development Center" (FFRDC) is used to designate an organization established to meet a particular R&D need of a Federal agency. It is managed by an institution of higher education (or a consortium of such institutions, such as the Associated Universities for Research in Astronomy). The relationships between FFRDC's and their parent institutions vary considerably. In some cases the link is extremely close, with the facilities located on the university campus and the staff drawn from university faculty, while in other cases the link may be a tenuous one, with the FFRDC located at a considerable distance from its parent and staffed by its own personnel. (See technical notes for a list of the criteria used in identifying FFRDC's.)

Federal agencies obligated $1,207 million to FFRDC's administered by universities and colleges in 1975. This represents an increase of 11 percent over the 1974 amount in current dollars, or 1 percent in constant (1972) dollars. Since the peak year of 1965, obligations have shown an overall decline in constant-dollar terms of 2 percent per year; to a large extent this reflects the reclassification of a number of former FFRDC's as either integral parts of their parent institutions or independent nonprofit research institutions.

As expected, the surveyed agencies allocated the major portion of the funds obligated to FFRDC's to research and development, 89 percent of the total. Almost all of the remainder went into R&D plant; obligations for all other projects combined accounted for less than one-tenth of 1 percent of the total. This represents declines from 1974 to 1975 of 47 percent in the amount awarded for fellowships, traineeships, and training grants, and 93 percent in the amount awarded for other scientific activities.

Research and development	979,376	1,077,916	10.1
R&D plant	97,105	128,772	32.6
Fellowships, traineeships, and training grants	664	351	-47.1
Other science activities	6,231	428	-93.1

Source: National Science Foundation

ERDA, the largest source of funding for FFRDC's, supplied $722 million, or 60 percent of the total. The second largest source, NASA, contributed $228 million, or 19 percent, while DOD was the source of $197 million, or 16 percent of the total. All other agencies combined accounted for only 5 percent of the total, almost all from NSF.

The 10 leading FFRDC's, in terms of total amounts received, accounted for 91 percent of the total, about the same proportion as was obligated to these same institutions in 1973 and 1974. NASA's Jet Propulsion Laboratory, administered by the California Institute of Technology, again headed the list by receiving $227 million, or 19 percent of the total funding for all academic FFRDC's, about the same proportion as in 1974. Nearly one-half of this amount, however, is estimated to have been subcontracted.[1] The Los Alamos Scientific Laboratory, with 15 percent of the total, moved up to second place, surpassing the Lawrence Livermore Laboratory. Of the 10 leading FFRDC's, only 2—the National Accelerator Laboratory and Lawrence Berkeley Laboratory—received less Federal support in 1975 than in 1974; their declines were 10 percent and 3 percent, respectively.

[1] National Science Foundation, *Detailed Statistical Tables, Expenditures for Scientific Activities at Universities and Colleges, Fiscal Year 1975* (NSF 76-316) shows $120 million as having been spent by JPL for intramural research and development (Washington, D.C. 20550, 1976).

Part II

FEDERAL SUPPORT TO SELECTED NONPROFIT INSTITUTIONS

Section 1. FEDERAL SUPPORT TO INDEPENDENT RESEARCH INSTITUTES

Federal funds obligated to independent nonprofit research institutes for research, development, and R&D plant by 14 surveyed agencies amounted to $391 million in 1975. Of the 178 independent research institutes included in the 1975 survey, 8 received a total of $6 million for R&D plant, 1.6 percent of Federal R&D and R&D plant obligations.[4] In 1974, by comparison, R&D plant funds comprised less than one-half of 1 percent of the $366 million obligated for research, development, and R&D plant.[5]

Total Federal obligations for research, development, and R&D plant received by all nonprofit institutions in the country, excluding FFRDC's, amounted to $728.3 million.[6] The $391 million in R&D funds to the selected nonprofit institutes in the 1975 survey represents 54 percent of total Federal obligations. It should be noted that while the nonprofit institutions receiving Federal funds include hospitals, private foundations, societies and academies of science, trade associations, science exhibitors, and other organizations, only research institutes are included in this survey.

[4] See technical notes, p. 00, for information on the selection process for independent nonprofit institutions in this study.

[5] Fluctuations in agency support levels reflect actual changes in the amounts of funds obligated annually and the changes in the composition of the universe of research institutions meeting the criteria for inclusion in the survey.

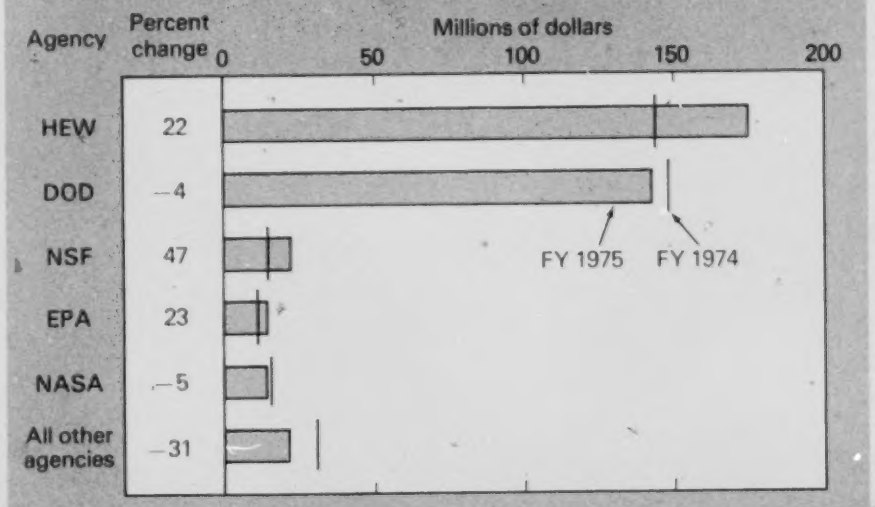
[6] National Science Foundation, *Detailed Statistical Tables, Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1975, 1976, and 1977*, Volume XXV (NSF 76-315), reports that nonprofit institutions received $717.8 million for research and development and $10.5 million for R&D plant in 1975. (Washington, D.C. 20550, 1976).

Agency Distribution

HEW, the major sponsoring agency for the third year in a row, provided 45 percent of the Federal R&D obligations to independent research institutes in 1975. DOD, the major Federal source of R&D support prior to 1973, together with HEW, provides over four-fifths of the total. NSF reported the largest increase in Federal obligations (47 percent) between 1974 and 1975 with increased funding in solar conversion research and basic research in several fields of science and engineering.[7] EPA increased its funding level by 23 percent to $14.5 million in its growing emphasis on pollution effects research. DOD decreased its funding by over $6 million, a 4-percent drop from the 1974 level.

[7] National Science Foundation, *An Analysis of Federal R&D Funding by Function, Fiscal Years 1969-1977* (NSF 76-325) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1977.)

Federal obligations to nonprofit research institutes for research, development, and R&D plant by agency: FY 1974 and 1975



SOURCE: National Science Foundation

Institutional Distribution

The 10 research institutes receiving the greatest amounts of Federal obligations for research, development, and R&D plant accounted for 57 percent of the total, or $223,170 in 1975; the top 20, for 71 percent. The Charles Stark Draper Laboratory, with 20 percent of the total, was the leading recipient of Federal R&D obligations for the second time since 1974 when it separated from MIT to become an independent research institute. Each of the top six nonprofit institutes maintained their standing in obligations received both in 1974 and 1975. Scripps Clinic and Research Foundation, appearing in the top 10 for the first time, received $7 million in 1975, compared to $0.4 million in 1974. Other large increases in Federal commitments were experienced by the Southwest Research Institute, 39 percent, and the Sloan-Kettering Institute for Cancer Research, 20 percent.

FY 1975

SOURCE: National Science Foundation

Section 2. FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS ADMINISTERED BY INDEPENDENT NONPROFIT INSTITUTIONS

Eleven Federal agencies committed $207.6 million in funds to nonprofit-administered FFRDC's for research, development, and R&D plant in 1975. This funding level represents a 12-percent increase over 1974 obligations after a 2-year decline, 3 percent in 1974, and 14 percent in 1973.

DOD obligated $145.9 million to six of the seven FFRDC's, accounting for 70 percent of the total. The Air Force and the Energy Research and Development Administration were the major supporting agencies supplying 90 percent of all obligations to nonprofit FFRDC's. Of the $39.9 million obligated by ERDA, 7 percent was allocated to R&D plant.

Federal obligations to nonprofit-administered FFRDC's by agency: FY 1975

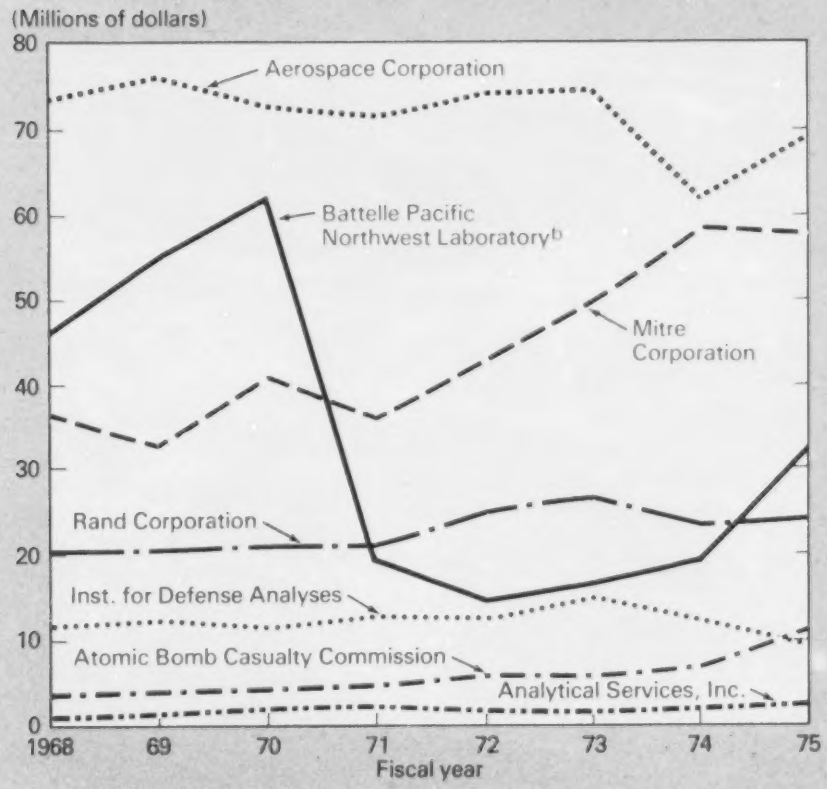
Source: National Science Foundation

The Aerospace Corporation of California remains the leading Federal recipient, experiencing an 11-percent increase in funding in 1975 after a downturn of 17 percent in 1974. Federal funding of the MITRE Corporation, the second-ranked FFRDC, leveled off in 1975 after receiving large annual increases since 1971. The Battelle Pacific Northwest Laboratory, whose main Federal sponsor is ERDA, experienced the largest increase in funding; however, the 1975 level at $33 million is much lower than that which was realized in 1970. Two nonprofit institutes discontinued their FFRDC status: the Atomic Bomb Casualty Commission in April 1975 and the Analytic Services, Inc., in October 1976.

Federal obligations to nonprofit-administered FFRDC's:[a] FY 1968-75



[a]Federally Funded Research and Development Centers.
[b]Data for 1971 and later years exclude amounts obligated to the Hanford Engineering Development Laboratory, which was established as an industry-administered FFRDC in that year.

CONCEPTS AND LIMITATIONS

The dollar figures presented herein refer to funds obligated by 14 Federal agencies to institutions of higher education, selected independent nonprofit research institutes, and those Federally Funded Research and Development Centers (FFRDC's) administered by universities and colleges or by independent nonprofit organizations. The 14 surveyed agencies are estimated to have accounted for 95 percent of all Federal obligations to universities and colleges, and for more than 99 percent of all such obligations for research and development. Data for four of the responding agencies (the Agency for International Development, the Department of Housing and Urban Development, the Department of Labor, and the Nuclear Regulatory Commission) were combined in most of the tablulations. These four agencies make up the "Other" category shown as the final column heading in tables showing funding by agency.

The total amounts reflect actual obligations by the reporting agencies during a particular fiscal year (July 1 to June 30), regardless of when the funds were actually received or spent by the recipient institution. The data systematically exclude certain types of Federal financial assistance, e.g., loans such as those made by the Office of Education (OE), agency support of Federal employee training and development activities, and funds obligated in the first instance to nonacademic organizations (State governments, for example) even if the ultimate destination of the funds is known to be an academic institution. Obligations were rounded by the respondents to the nearest thousand dollars.

Data for individual institutions represent direct Federal support, and thus exclude any amounts subcontracted to other institutions or received from prime contractors under subcontract arrangements. The location in which the research supported was actually performed cannot therefore be determined if it took place elsewhere than at the institution to which the funds were initially obligated. In cases of interagency transfers of funds, the agency which actually obligated the money to the universities or other nonprofit organizations reported the obligations, rather than the agency originating the funds.

Obligations to systems of institutions are reported insofar as possible in terms of the individual universities and colleges within the system. Amounts awarded directly to an administrative center or system office are listed separately. In some cases, however, if the final destination of the funds is not known by the agency at the time of the award, the obligations are reported as going to the system's administrative office, or "central system". The funds may then be allocated at the system office level among the individual institutions within the system. In such cases, amounts for system offices will be overstated and amounts to individual institutions correspondingly understated. In 1975, the responding agencies reported obligations to 2,486 individual universities and colleges and 31 system offices.

Amounts shown as having been awarded for various types of activity may not reflect the actual distribution of expenditures from those funds by the recipient institution. For example, DOD obligations were reported as being entirely for research and development, even though some of the funds were actually used to support plant and facilities.

Federal obligations to universities and colleges do not include funds obligated to FFRDC's administered by academic institutions. Funds for these organizations are shown separately.

The Federal obligations shown for 178 selected nonprofit research institutes, and for the 7 nonprofit-administered FFRDC's, represent about 89 percent and 92 percent, respectively, of the total amounts obligated to these types of institutions by all agencies of the Federal Government.[1]

In general, hospitals, professional and technical societies, academies of science, museums, trade associations, and philanthropic foundations are not included in this study. These types of nonprofit organizations accounted for an estimated 23 percent of all Federal support to nonprofit institutions other than universities and colleges in 1975.[2]

RELATIONSHIP OF THIS STUDY TO *FEDERAL FUNDS FOR RESEARCH, DEVELOPMENT, AND OTHER SCIENTIFIC ACTIVITIES*

Both the present survey and the parallel *Federal Funds for Research, Development, and Other Scientific Activities* series obtain data on obligations of Federal agencies for research and development and R&D plant to universities, colleges, and other nonprofit research institutes and to FFRDC's administered by these types of organizations. This study, however, is primarily concerned with data on total Federal support for individual institutions, whereas the *Federal Funds* survey series emphasizes summary statistics on research and development and R&D plant obligations of all Federal agencies to each sector of the economy, including Government, industry, universities and colleges, and all

[1] National Science Foundation, *Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1975, 1976, and 1977*, Volume XXV (NSF 77-301) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1977.)

[2] Estimates based on data published in National Science Foundation, *R&D Activities of Independent Nonprofit Institutions, 1973* (NSF 75-308) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1975.)

other nonprofit organizations. In the *Federal Funds* surveys, the emphasis is on type of R&D activity (basic research, applied research, and development) *and* type of performer rather than on individual universities and colleges receiving funds.

In general, concepts and definitions used in the two surveys coincide closely; however, because of the different emphases of the studies, the data gathered will not and cannot conform exactly in all respects. Among the major reasons for reporting differences are the following:

(a) In the *Federal Funds* surveys, agencies report budget figures in terms of aggregate sector totals, whereas the *Federal Support* surveys request data from each agency's information system in terms of totals for each recipient.

(b) Data presented in this report are based on the responses of 14 Federal agencies with relatively large and stable programs in support of scientific and engineering activities at universities and colleges, whereas *Federal Funds* data are obtained from all agencies of the Federal Government.

(c) Certain categories of funding are classified differently in the two studies. For example, the General Research Grants Program of the National Institutes of Health (NIH) is classified under "research and development" for purposes of the *Federal Funds* surveys, but under "general support for science" in this survey. Similarly, the National Science Foundation (NSF) reported as "research and development" in the *Federal Funds* surveys that portion of institutional development funds which was used to support R&D activities, but reported all institutional development funding under "general support for science" in the *Federal Support* surveys.

(d) "Selected nonprofit institutions" in this report are primarily the larger independent research institutes (those believed to have received at least $300,000 from all agencies of the Federal Government). Hospitals, professional and technical societies, academies of science, private philanthropic foundations, science exhibitors, trade and agricultural associations, and other types of nonprofit organizations are generally excluded from this survey. By contrast, data for "other nonprofit organizations" in the *Federal Funds* report include all such organizations in the country.

(e) Funds transferred from one Federal agency to another and then obligated to an educational or nonprofit institution are reported in the *Federal Funds* surveys under the agency initiating the transfer, while in the *Federal Support* surveys such obligations are reported by the agency which actually makes the grant to the university, college, or other institution.

DEFINITION OF TERMS

Universities and colleges are defined as all institutions of higher education in the United States which offer at least two years of college-level studies in residence. University or college includes all components of an academic institution, such as colleges of liberal arts, professional schools, hospitals, schools of agriculture, agricultural experiment stations, etc., as well as bureaus, offices, and research centers (excluding FFRDC's), whether located on or off the main campus, and branch campuses under the direct control of the parent institution. The universe of academic institutions upon which this survey is based is derived from the *Education Directory, Colleges and Universities: 1975-1976* compiled by the National Center for Education Statistics, and NSF's Institutional Technical Reference File. Institutions included in this report are those which received some Federal support during fiscal year 1975, and possessed a significant degree of educational and administrative autonomy. Thus, institutions organized into systems (groups of institutions having a collective legal status and generally recognized by a State government, a board of education, or other relevant organization), where a significant degree of autonomy remains at the individual institution level, are shown as separate institutions, while obligations to branch campuses are included in the totals for their parent institutions. The survey excludes all obligations to the service academies and to the U.S. Department of Agriculture Graduate School.

Independent nonprofit institutions included in this study are limited to 178 selected nonprofit research institutes and 7 FFRDC's administered by nonprofit organizations. The list of nonprofit organizations sent to the responding agencies was compiled prior to the data-gathering phase of the 1975 survey, and consisted of all those institutions which were believed likely to have received at least $300,000 in total Federal obligations for research and development during fiscal year 1975, or $100,000 from any single agency. To assure that coverage was as complete as possible, the list includes several institutions with funding of less than $300,000. In addition, a number of the responding agencies reported their obligations to other institutions not on the original list, where these obligations exceeded the $100,000 minimum. Since the survey produced funding information on these smaller institutions, they are included in the report. In general, nonprofit organizations other than research institutes and FFRDC's—e.g., hospitals, societies, and academies of science, science exhibitors, trade associations, etc.,—are excluded, except in a few cases where the magnitude of their R&D programs tends to impart to them some of the characteristics of research institutes.

FFRDC's in this report are organizational units managed by universities and colleges or other nonprofit institutions. Generally, these units have been established to meet a particular R&D need of a Federal agency. Uniform identification and classification criteria have been developed for use by all sponsoring agencies. To be classified as an FFRDC, an organization should:

(a) Perform primarily one or more of the following: basic research, applied research, development, or management of research and development. Specifically excluded are organizations engaged primarily in routine quality control and testing, routine service activities, production mapping surveys, and information dissemination;

(b) Constitute a separate operational unit within the parent organization or be organized as a separately incorporated organization;

(c) Perform actual research and development or R&D management either upon direct request of the Government or under a broad charter from the Government, but in either case under the direct monitorship of the Government;

(d) Receive its major financial support—70 percent or more—from the Federal Government, usually from one agency;

(e) Have, or to be expected to have, a long-term relationship—about 5 years or more—with its sponsoring agency, as evidenced by the specific obligations it and the agency assume;

(f) Be established in the contract so that most or all of the facilities are owned or funded by the Government; and,

(g) Have an average annual budget, including operating and capital equipment, of at least $500,000.

The report includes 21 FFRDC's administered by universities and colleges and 7 administered by nonprofit institutions. Of the 21 university-administered FFRDC's in 1975, 13 were administered by individual institutions, 7 by consortia of universities, and 1—Argonne National Laboratory—jointly by the University of Chicago and the Argonne Universities Association.

Academic science includes all obligations for research, development, R&D plant, education (both graduate and undergraduate), and dissemination of information in the scientific and engineering fields. Academic science obligations are distributed among the following six categories:

Research and development includes all research activities, both basic and applied, as well as all development activities, which are supported at universities and colleges. *Research*, in the context of science and engineering, is defined as scientific inquiry. It includes basic research, in which the investigator is concerned primarily with gaining a fuller knowledge or understanding of the subject under study; and applied research, in which the investigator is

primarily interested in a practical use of the knowledge or understanding to meet a recognized need. *Development* is defined as the systematic use of knowledge gained from research, directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes. Research and development exclude routine product testing, quality control, experimental production, mapping and surveys, collection of general-purpose statistics, and activities concerned primarily with the dissemination of scientific information. Research and development in the arts and humanities are not included in this category but are included in "nonscientific activities."

R&D plant includes all projects whose principal purpose is to provide support for the construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or equipment for use in scientific or engineering research and development. A facility is defined broadly to include any physical resource important to the conduct of research or development. All costs—direct, indirect, and related—are included.

Facilities and equipment for instruction in the sciences and engineering includes all programs whose principal purpose is to provide support for the construction, acquisition, renovation, modification, repair, or rental of facilities, land, works, or equipment for use in instruction in science and engineering.

Fellowships, traineeships, and training grants include programs which are directed primarily toward the development and maintenance of scientific and technical manpower. The total amounts pertaining to such awards (stipends and cost-of-education allowances) are reported in terms of the institution chosen by the recipient. Excluded are projects which support research and educational institutes, seminars, and conferences such as teacher training activities provided through teacher institutes, short courses, research participation, and inservice seminars; activities aimed at the development of educational techniques and materials for use in science and engineering training; and programs which provide special opportunities for increasing the scientific knowledge and experience of precollege and undergraduate students. These activities are included in "other science activities" and "nonscience activities," depending on the field.

General support for science and engineering includes activities which provide support for nonspecific or generalized purposes related to scientific research and instruction. Such projects are generally oriented toward academic departments, institutes, or institutions as a whole, and range from support provided without any specification of purpose other than that the funds be used for scientific activities, to projects that provide funds for activities within a specified field of science without specifying purpose, or for a certain type of activity without specifying the field. NIH's Biomedical Sciences Support Grants and General Research Support grants are examples of these types of programs.

Other science and engineering activities include all academic science activities that cannot meaningfully be assigned to one of the preceding five categories. Examples include obligations in support of technical conferences, short sources for the training of science teachers, etc.

Nonscience activities include all other obligations which are not included in the six science categories defined above, but which represent direct funding (excluding loans) from a Federal agency to an academic institution for activities or purposes not specifically related to science and engineering. Included are all obligations for research, education, and facilities in the arts and humanities.
